This paper makes the following assumptions: 1) The flowing gases are assumed to have uniform energy distribution. (Isoenergetic gas flows, that is valid with the same constants for the the energy equation entire flow. ) This is correct, for example, for gas flows issuing from a region of constant pressure, density, temperature, end velocity. This property is not destroyed by compression...

*A very amazing publication with perfect and lucid information. We have read through and that i am certain that i will planning to study once more yet again in the future. You will not really feel monotony at anytime of the time (that's what catalogues are for about should you question me).*
